Professional Summary

Software Engineer with **6 years** building enterprise workflow, document-management and API-driven systems in **Python and Django**, across backend, frontend, integration and deployment, on a platform serving **48 active enterprise clients** including banks. Currently **sole developer of the AI capability in its workflow module** — document extraction into approval forms, document matching, grounded Q&A and an in-task assistant.

Technical Skills

Backend: Python, Django, Django REST Framework, FastAPI, Flask, PostgreSQL, MySQL, Elasticsearch, Celery, Redis, Pydantic, SQLAlchemy

Applied AI: LLM integration (cloud, Ollama), LangChain, LangGraph, structured output, OCR/vision extraction, grounded Q&A, RAG, embeddings, vector search

Security & Access: Role-based access control, LDAP/SSO, OAuth 2.0, JWT, VAPT remediation, encryption of credentials at rest

Frontend & Mobile: JavaScript, jQuery, Vue.js, HTML5, CSS3, Bootstrap, Flutter/Dart (familiar)

DevOps & Tools: Docker, Linux (Ubuntu), Nginx, Gunicorn, DigitalOcean, Git, pytest, Postman, AI-assisted development (Claude Code, Codex)

Professional Experience

DataFort Limited · Dhaka, Bangladesh — Dec 2022 – Present

Software Engineer · Jul 2024 – Present · previously Mid-Level Software Engineer, Dec 2022 – Jun 2024

Product: Robo2mation — enterprise platform that digitises business processes, approvals and documents through configurable workflows.

- Designed and built backend services and REST APIs in **Python, Django REST Framework and PostgreSQL** that run the **BPMN workflow engine** — approval routing, conditional gateways, task assignment, delegation and process tracking — for **48 active enterprise clients**.
- Built the **no-code layer** — dynamic eForms, master tables, business rules and API connectors — so most new client requirements ship as configuration instead of custom code.
- Built **document-management** features — upload, metadata, versioning, sharing — with **Elasticsearch**-backed search over document content and metadata.
- Implemented **role-based access control and LDAP/SSO** for banking clients, closed findings from third-party **VAPT** assessments, and integrated client systems over **REST, XML and JSON** APIs.
- Ran long-running work asynchronously with **Celery and Redis**, led platform version migrations, and diagnosed production issues across database queries, background jobs and deployment configuration.
- Built the **JavaScript and jQuery** interfaces — form builder, dashboards, document screens and reports — and contributed **Flutter** screens to the mobile app.

PyronLab · Dhaka, Bangladesh — Oct 2020 – Nov 2022

Junior Software Engineer

- Developed and maintained commercial web applications (**nanaya.co, Imarat.com.bd, PyronConverter, ChangeUnit**) in **Python, Django, JavaScript, jQuery and Vue.js**: business logic, REST APIs and frontend features.
- Deployed and supported applications on **DigitalOcean** with Linux, Nginx and Gunicorn, improving reliability through debugging, refactoring and production configuration.

AI Engineering Projects

Robo2mation AI Actions — AI Assistant for Workflows · DataFort · sole developer — Django · Celery · LangChain · OCR

Document extraction that fills approval forms, invoice-to-order matching, task summarisation and grounded Q&A over a request. Every value carries its source text, page and confidence, and nothing enters a form until a person accepts it. Pluggable provider layer (OpenAI, Gemini, Ollama).

Mail2Record — Email-to-Records Automation — Django · PostgreSQL · Ollama

Turns order and shipment emails into structured records: extracts from the email and its attachments, routes the result for review, exports to Excel or CSV.

EduNova — AI Learning Platform — FastAPI · PostgreSQL · RAG

Textbook-grounded learning platform: students ask questions about a book and receive AI-generated practice questions.

Education

B.Sc. in Computer Science & Engineering — Dec 2019

United International University, Dhaka · Merit-based scholarships

Professional Certificate: Python and Django for Web and API Development · CDIP — 2020
